About IAM4NFDI

Overview of service benefits

IAM4nfdi

Built on **open standards** and existing, well-proven solutions like the **Guidelines of the AARC community**

- **Accessibility:** IAM4NFDI is about the ‚A‘ in FAIR
- **Scalability:** Access to resources by concept of virtual organizations (VO)
- **Governance:** Managed by research communities of NFDI
- **Interoperability:** Technical Policies and Architecture aligned with AARC BPA
- **Security**: Security Framework and Procedures
- **Trust**: Policy Framework

Where are we now, and where are we going?

Status of service development

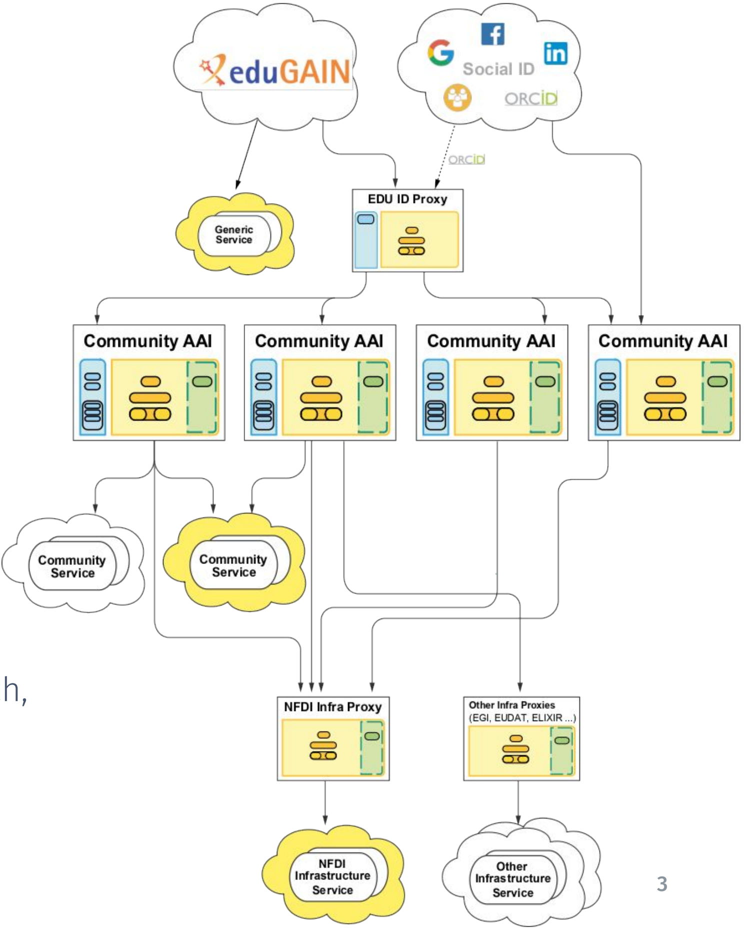
NFDI-AAI

- Architecture based on the AARC Blueprint Architecture
- 4 NFDI Community AAIs
  - AcadamicID
  - didmos
  - RegApp
  - Unity
- Identities: eduGAIN and national R&E Federations
- NFDI Infra Proxy
- Interoperability: with EOSC AAI and Infrastructures (NHR, EGI, LifeScienceAAI)

Service Providers & Partners

DFN-Verein, RWTH Aachen University, DAASI International, FZ Jülich, GWDG, KIT, RPTU Kaiserslautern-Landau

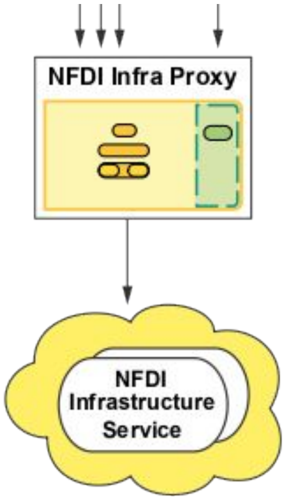
For more Information, visit our NFDI AAI Documentation



Infrastructure Proxy

Service component

- The Infrastructure Proxy is supposed to be connected to all Community AAI instances
  - … and to the central hub of the upcoming EOSC AAI Federation
- Integration point for services that address cross-community use cases, i.e. to make services available to users from the entire NFDI
- Brings together user information from different sources
  - Home IdPs from Identity Federations (DFN-AAI and eduGAIN)
  - ORCID and Social Login
  - DFN edu-ID and Guest IdPs
  - VO membership and resource capability information (Community AAIs)
- Forwards this information to the connected services (if required)
- Enables Identity Linking between Community AAIs and/or other identity sources



For more Information, visit our NFDI AAI Documentation

edu-ID

Service component

- DFN edu-ID, proxy-based architecture (upcoming DFN service, not part of the project)
- Lifelong, self-managed digital identity for research and higher education
- Provides an immutable persistent identifier
- Addresses the problem of “Researcher Mobility”
- Attribute aggregation and account linking from different sources like Home IdPs, ORCID and MyAccessID
  - *planned → EOSC AAI Federation*
- Can be used as Central Guest IdP

Do you need more information on edu-ID?

Concept Community AAI

Service component

Connecting your Service

- SAML & OAuth2/OIDC
- Usage of common/standardized attributes
- Reliable set of available information
- No need to handle with multiple home organisations
- Contact the Community AAI operators for client requests

Concept Community AAI

Service component

Management of groups within the community

- Communities are called **Virtual Organisation (VO)**
- Namespace per community/consortium under **urn:geant:dfn.de:nfdi.de**
- UI for management/invitation of the community members
- Subgroups to structure the community
- Permission management via roles/subgroups
- Contact the Community AAI Operators for a VO request

For more Information, visit our NFDI AAI Documentation
