What are (Jupyter) Notebooks?

Technology overview

Source code

Visualization
(potentially interactive)

Natural language

Examples:

- ☐ Jupyter
- ☐ Quarto
- ☐ Pluto.jl
- ☐ ...

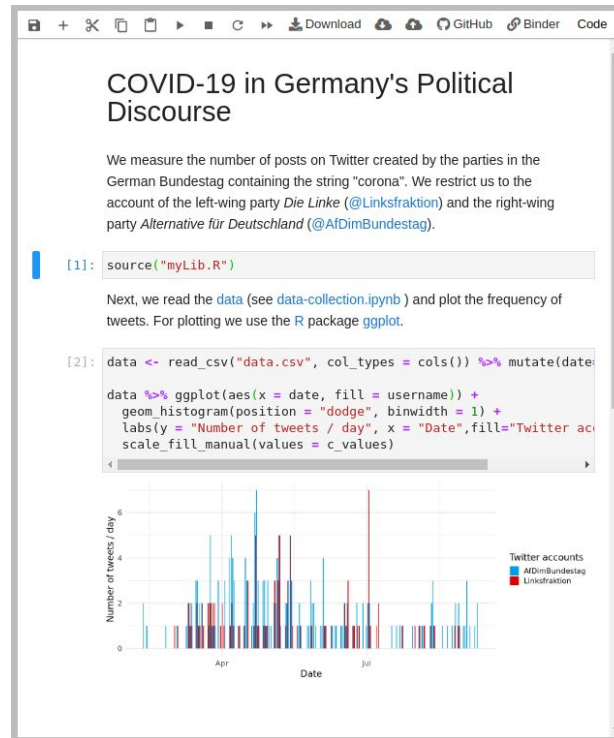

What are (Jupyter) Notebooks?

Computation

Cloud:

- ❑ potentially large Data
- ❑ standardized environment
- ❑ 1-Click reproducibility

Personal Computer:

- ❑ only small data
- ❑ every environment different
- ❑ time-consuming to set up

JupyterLab (IDE)

Components

Backend for notebooks

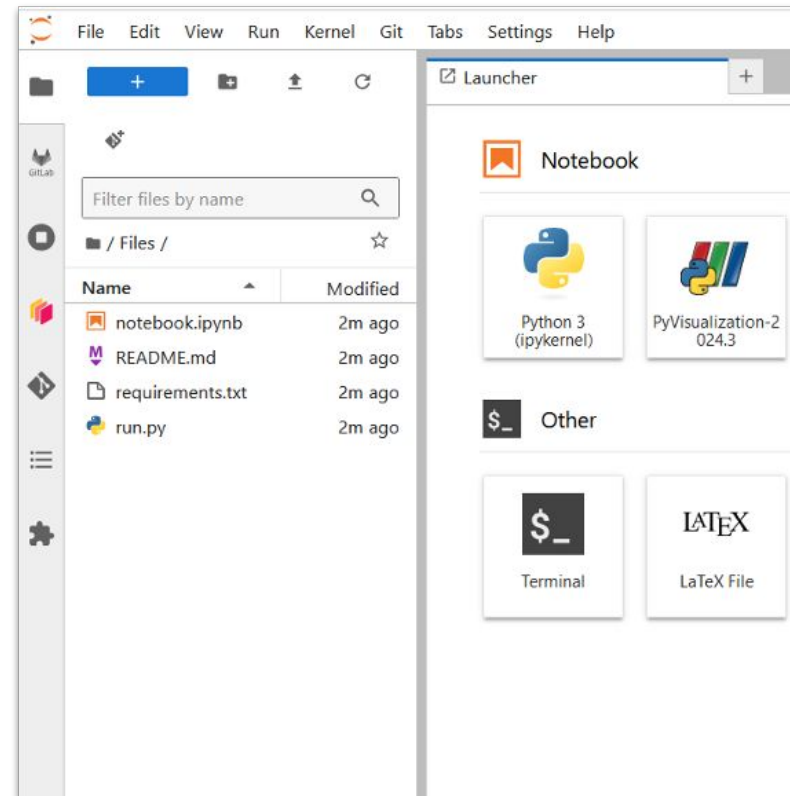

- executes code and serves the notebook interface in a browser

Web interface

- provides a browser-based web interface

JupyterLab

- Next-gen interface
- Extendible (terminal, text editor, file browser)
- Endless customization

What is Jupyter4NFDI?

Service definition

... is a **cloud-based computational analysis service** that enables researchers to focus on the methodological aspects of their work while increasing their reach and following best open-science practices at the same time.

The service does not try to reinvent the wheel, but reuses and integrate existing components whenever possible.

Why Jupyter4NFDI?

Heterogeneous Availability

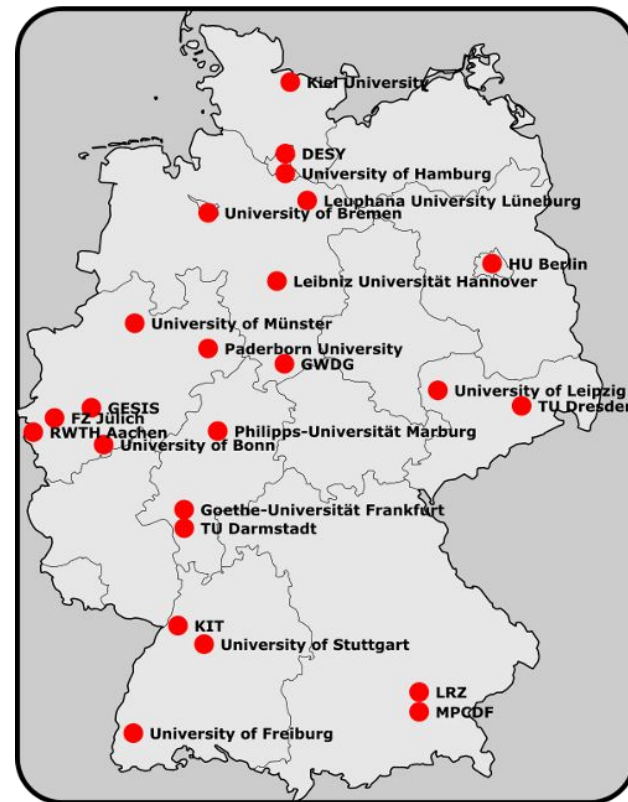

Dozens of JupyterHubs in Germany

Challenges

- Many are not accessible to external users
- Which JupyterHubs are available to me?
- What are the differences?

Proposed solution

- Centralized “default” JupyterHub
- Combining resources of providers
- Not a replacement, but **complementary service** to enhance access and usability for all users

Why Jupyter4NFDI?

Heterogeneous Availability

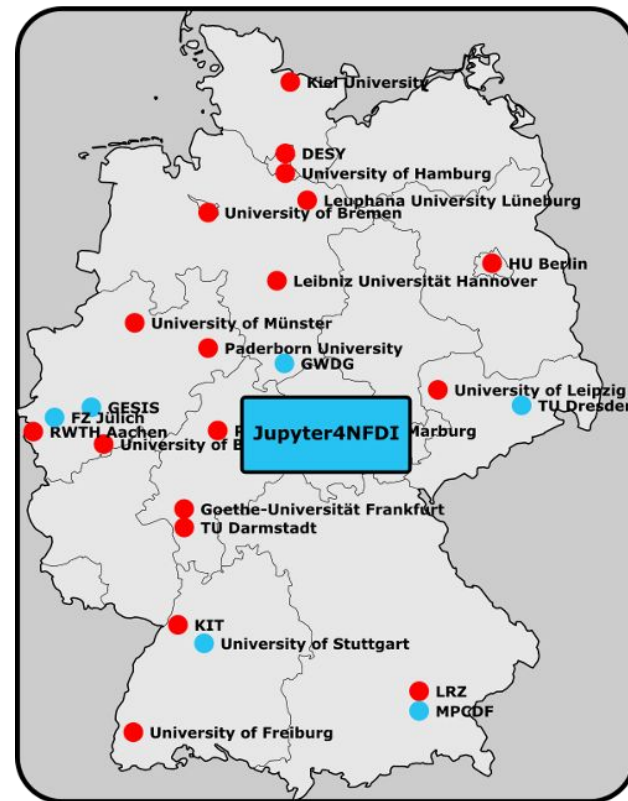

Dozens of JupyterHubs in Germany

Challenges

- Many are not accessible to external users
- Which JupyterHubs are available to me?
- What are the differences?

Proposed solution

- Centralized “default” JupyterHub
- Combining resources of providers
- Not a replacement, but **complementary service** to enhance access and usability for all users

Why Jupyter4NFDI?

Benefits of the service

Easy access to resources

- Login with your Home IdP or social IdPs

Exclusive features

- Repo2Docker (Binder) integration into JupyterHub
- Shareable links

Highly customizable

- Run your own Docker images
- Create your environment

Persistent storage

- Varies by provider
- Centralized storage is planned for the future

Jupyter4NFDI

NFDI JupyterHub & Service Documentation

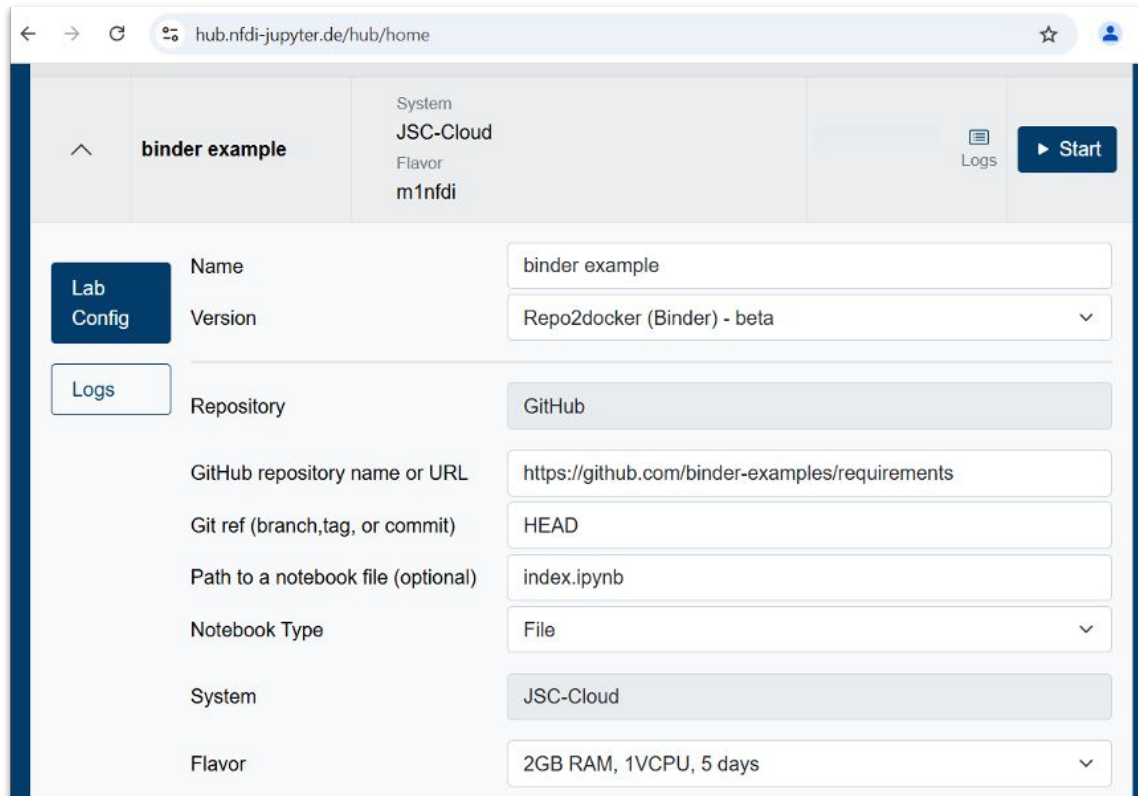

JupyterHub

 <https://hub.nfdi-jupyter.de>

1-Click Import

 https://hub.nfdi-jupyter.de/v2/gh/gesiscss/Jupyter4NFDI_survey_results/HEAD

A screenshot of a web browser showing the configuration page for a JupyterLab environment. The browser address bar shows 'hub.nfdi-jupyter.de/hub/home'. The page has a header with a menu icon, the name 'binder example', system information 'JSC-Cloud' and 'Flavor m1nfdi', a 'Logs' link, and a 'Start' button. The main content area has a sidebar with 'Lab Config' and 'Logs' tabs. The 'Lab Config' tab is active, showing a form with fields for Name, Version, Repository, GitHub repository name or URL, Git ref, Path to a notebook file, Notebook Type, System, and Flavor. The values are: Name: binder example, Version: Repo2docker (Binder) - beta, Repository: GitHub, GitHub repository name or URL: https://github.com/binder-examples/requirements, Git ref: HEAD, Path to a notebook file: index.ipynb, Notebook Type: File, System: JSC-Cloud, Flavor: 2GB RAM, 1VCPU, 5 days.

^	binder example	System JSC-Cloud Flavor m1nfdi	Logs	Start
Lab Config	Name	binder example		
	Version	Repo2docker (Binder) - beta		
Logs	Repository	GitHub		
	GitHub repository name or URL	https://github.com/binder-examples/requirements		
	Git ref (branch,tag, or commit)	HEAD		
	Path to a notebook file (optional)	index.ipynb		
	Notebook Type	File		
	System	JSC-Cloud		
	Flavor	2GB RAM, 1VCPU, 5 days		

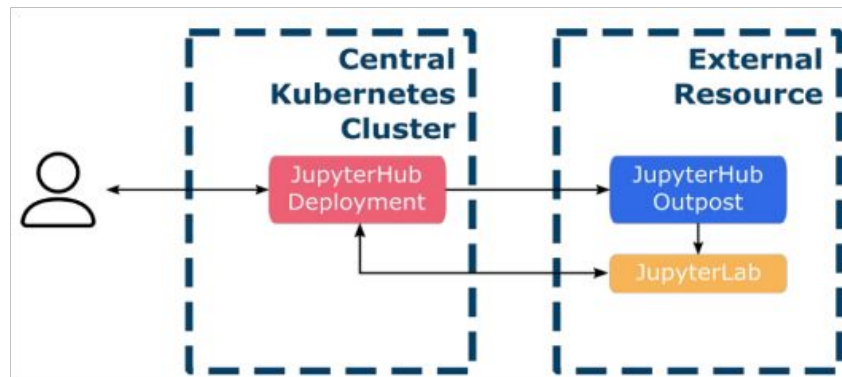

Jupyter4NFDI

Technical concept

- The **central JupyterHub** acts as an **access point** to multiple resources in the background
- Resource providers can install a "JupyterHub Outpost" to **integrate their resources with the central JupyterHub** following general standards
- Throughout the project, additional resource providers will be integrated into the central service, expanding the available **resources, environments, features, and capabilities**

Partners and Resources:

- Text+ (FZ Jülich, GWDG)
- NFDI4DS (GESIS, TU Dresden, Univ. of Stuttgart)
- FAIRmat (MPCDF)

Jupyter4NFDI

Outlook on Integration Phase

Potential start:
October 2025

- **Onboarding of Content:** Content from Base services of other consortia, as well as from individual content producers and researchers.
- **Verifiable Reproducibility:** Based on FAIR Jupyter, we will share a knowledge graph for computational notebook reproducibility.
- **Training:** We will provide reusable training materials for both regular users and researchers, aiming to make their computational workflows Jupyter4NFDI-ready.

Quiz: Which benefits does Jupyter4NFDI offer their users?

- A) Run your own Docker images**
- B) Import binder-ready analysis pipelines**
- C) Get central access to multiple resources via a browser-based interface**
